New Question You plan to deploy 200 Microsoft SQL Server databases to Azure by using SQL Database and Azure SQL Database Managed Instance. You need to recommend a monitoring solution that provides a consistent monitoring approach for all deployments. The solution must meet the following requirements: Support current-state analysis on metrics collected near real-time multiple times per minutes and maintained for up to one hour. Support longer term analysis based on metrics collected multiple timer per hour and maintained for up to two weeks. Support monitoring of the number of concurrent logins and concurrent sessions. What should you include in the recommendation?
A. Azure Monitor
B. dynamic management views
C. SQL Server-Profiler
D. trace flags
Answer: D
New Question HOTSPOT You configure thea Diagnostics settings for an Azure SQL database as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on The information presented in the graphic. NOTE: Each coned selection is worth one point.

Answer:

New Question You have an Azure Contoso DB account named Account1 that has one write region and four read regions. You need to recommend a solution to ensure that, by default, any reads containers in Account1 will never see out writes. The solution must minimize costs. What should you recommend?
A. Configure Account1 to use the Strong consistency level.
B. Create all the containers in Account1 as fixed.
C. Create all the containers in Account1 as unlimited.
D. Configure Account 1 to use the Consistent Prefix consistency level
Answer: A

New Question **HOTSPOT** You plan to deploy logical Azure SQL Database servers to The East US Azure region and the West US Azure region. Each server will contain 20 databases accessed by a different user who reads in a different on-premises location. The databases will be configured to use active geo-replication. You need to recommend a solution that meets the following requirements:
- Restricts user access to each database?
- Restricts network access to each database based on each user's respective location?
- Ensures that the databases remain accessible from down applications if the local Azure region fails
What should you include in the recommendation? To answer, select the appropriate options in the answer area
NOTE: Each correct selection is worth one point.

Answer:

New Question You use Azure virtual machines to run a custom application that uses an Azure SQL database on the back end. The IT department at your company recently enabled forced tunneling. Since the configuration change, developers have noticed degraded performance when they access the database. You need to recommend a solution to minimize latency when accessing the database. The solution must minimize costs. What should you include in the recommendation?
A. Azure SQL Database Managed instance
B. Azure virtual machines that run Microsoft SQL Server servers
C. Always On availability groups
D. virtual network service endpoint
Answer: D

New Question You have 100 Microsoft SQL Server Integration Services (SSIS) packages that are configured to use 10 on-premises SQL Server databases as their destinations. You plan to migrate the 10 on-premises databases to Azure SQL Database. You need to recommend a solution to host the SSIS packages in Azure. The solution must ensure that the packages can target the SQL Database instances as the destinations. What should you include in the recommendation?
A. Azure Data Catalog
B. SQL Server Migration Assistant (SSMS)
C. Data Migration Assistant
D. Azure Data Factory
Answer: A

New Question You need to recommend a solution to generate a monthly report of all the new Azure Resource Manager resource deployment in your subscription. What should you include in the recommendation?
A. Azure Activity Log
B. Azure Monitor action groups
C. Azure Advisor
D. Azure Monitor metrics
Answer: B

New Question You have 100 Standard F2vs-v2 Azure virtual machines. Each virtual machine has two network adapters. You need to increase the network performance of the workloads running on the virtual machine. The solution must meet the following requirements:
- The CPU-to-memory ratio must remain the same.
- The solution must minimize costs. What should you do?
A. Enable SRIOV
B. Enable ROMA over InfiniBand
C. Install an additional network adapter
D. Configure NIC teaming
Answer: A
