Machine DetailsB. Activity ManagerC. Connection FailuresD. Average Logon Duration Answer: D QUESTION 152Which two components does Citrix recommend an administrator install on a master image for optimal application access? (Choose two.) A. Online plug-inB. Offline plug-inC. EdgeSight agentD. provisioning services target device Answer: AB QUESTION 153Scenario: A Citrix Administrator implements StoreFront to replace Web Interface in an environment. The IT director wants to upgrade the version of Receiver on all workstations. Which two components could the administrator use to deploy Receiver? (Choose two.) A. StoreFrontB. Group PolicyC. AppControllerD. Delivery Controller Answer: AB QUESTION 154Scenario: A Citrix Administrator is configuring a new Citrix License Server. This is the only License Server in the environment. After promoting this new License Server to the production environment, the administrator receives support tickets stating that users are unable to launch any published applications. Additionally, the users are receiving the following license error:There are no licenses available.Which action should the administrator take to resolve this issue? A. Add licenses to the new License Server.B. Install Citrix Licensing on a different server.C. Install the Virtual Delivery Agent on the new License Server.D. Ensure that TCP 8082 port is allowed on the new License Server. Answer: A QUESTION 155A Citrix Administrator updates a vDisk assigned to a group of pooled desktops. Which two steps must the administrator take to ensure that the updated vDisk is associated with the pooled desktops? (Choose two.) A. Update the vDisk's inventory.B. Promote the vDisk to production.C. Place the vDisk into private image mode.D. Recreate the pooled desktops associated with the vDisk. Answer: AB QUESTION 156Scenario: A Citrix Administrator receives complaints that virtual desktops are becoming unresponsive. The current XenServer environment consists of one server that has two 16-core processors and 96 GB of RAM. Dynamic memory control is enabled. Each virtual machine is assigned 2 GB of RAM and 2 vCPUs. Currently, the environment has 65 virtual desktops. To resolve the issue that users are experiencing, the administrator could add additional _____. (Choose the correct option to complete the sentence.) A. NICsB. CPUsC. storageD. memory Answer: D QUESTION 157Scenario: An organization has two XenDesktop sites. Each site has its own Delivery Controller. Users logging on to the Receiver for Web site report that applications and desktops from both sites are intermittently unavailable. Which action could a Citrix Administrator take to investigate this issue? A. Add each Delivery Controller to the server list.B. Use different XML ports for each Delivery Controller.C. Create a separate StoreFront store for each XenDesktop site.D. Add each Delivery Controller as unique delivery controller types in the Receiver for Web site. Answer: D QUESTION 158Scenario: A user is unable to launch a virtual desktop through NetScaler. A Citrix Administrator notices a warning on the browser's certificate section. What are two likely causes of this issue? (Choose two.) A. The certificate is 3DES.B. The certificate is expired.C. The certificate is NOT linked to the root CA.D. The certificate is NOT installed on the virtual desktop. Answer: BC QUESTION 159An Citrix administrator was just told that several new employees will be joining the helpdesk support department. How can the Citrix administrator ensure that the new employees have a desktop? A. Add machines to the existing catalogB. Create a new catalog for the new employeesC. Add

more desktops to the existing desktop groupD. Create a new desktop group for the new employees Answer: C QUESTION 160 Which two consoles could a Citrix Administrator use to back up a XenDesktop database? (Choose two.) A. Citrix StudioB. Citrix DirectorC. Citrix XenCenterD. SQL Management Studio Answer: AD QUESTION 161Scenario: A Citrix Administrator creates a new master image to be used with Machine Creation Services. When the administrator creates a new machine catalog from this master image, the newly created virtual desktops are unable to join the domain. What is preventing the newly created virtual desktops from properly joining the domain? A. The administrator did NOT run sysprep on the master image.B. The new machines were NOT able to resolve the FQDN of the Delivery Controllers.C. The new machines were NOT able to contact the Active Directory domain controller.D. The master image was NOT a member of the domain before the new machines were created. Answer: D QUESTION 162Scenario: A database server outage occurs on the server that hosts the Provisioning Services database. The database has offline database support enabled. After the database is restored, _____ and _____. (Choose the two correct phrases to complete the sentence.) A. all logs will be available as neededB. the stores will have to be reconfiguredC. status changes to device collections will appearD. auditing will show only previously recorded administrative actions Answer: CD QUESTION 163Scenario: Thin clients with locally attached USB HP printers are used in the labs on a university campus. A Citrix Administrator configures the thin clients to connect to server OS machines. The IT director does NOT want to overload the server OS machines with non-native printer drivers. The IT director also wants to control the number of printers in each user's session. Which two actions should the administrator take to meet the requirements of the scenario? (Choose two.) A. Enable printer properties retention.B. Configure Client LPT port redirection.C. Configure the printer policy to 'Use Universal Printing Only'.D. Enable the 'Auto-create local (non-network) client printers only' setting. Answer: CD Braindump2go Offers 100% money back guarantee on all products! Our products remain valid for a lifetime!
