The app will be used to access details about products that your company sells. Business Requirements The app must do all of the following:- Be available to customers in many different countries.- Display a list of product categories.- Display the products for a selected category.- Display details of a selected product.- Display images of each product one at a time in a vertical presentation. - Provide a link to an about section in the Settings pane.- Update product data on a daily basis.- Allow the user to view the last selected product while the app is offline.- Be deployed in the Windows Store. Technical Requirements General- When the user restarts the app, the app must start in the state it was in when it was last used.- App settings controls must be 346 pixels wide.- The app must optimize bandwidth use and performance. Security- The app must use an enterprise certificate.- The user must provide valid credentials to access the app. - After user authentication, the app must use stored credentials. - User accounts will be validated against a pre-existing enterprise service. App Architecture- Service calls must be separated from the user interface.- The app must follow the MVC design pattern.- Service classes can be written in C++, C#, VB, or JavaScript. - The app must communicate with pre-existing enterprise services. Application Structure Relevant portions of the app files are shown below. (Line numbers in the code segments are included for reference only and include a two-character prefix that denotes the specific file to which they belong.)
