You use a remote site MGCP gateway to provide redundancy when connectivity to the central Cisco Unified Communications Manager cluster is lost. How to enable IP phones to establish calls to the PSTN when they have registered with the gateway? (Choose three.)A. POTS dial peers must be added to the gateway to route calls from the IP phones to the PSTN.B. The default service must be enabled globally.C. The command ccm-manager mgcp-fallback must be configured.D. Configure all SIP trunks with DNS SRVB. Configure all SIP trunks with Cisco Unified Border ElementC. Configure all SIP trunks to point to a SIP gatewayD. Configure SIP trunks to be members of route groups and route listsE. Configure all SIP trunks to allow TCP ports 5060F. Configure all SIP trunks to point to a gatekeeper through SIP to H.323 gatewayAnswer: ADExplanation:For SIP trunks, Cisco Unified Communications Manager supports up to 16 IP addresses for each DNS SRV and up to 10 IP addresses for each DNS host name. The order of the IP addresses depends on the DNS response and may be identical in each DNS query. The OPTIONS request may go to a different set of remote destinations each time if a DNS SRV record (configured on the SIP trunk) resolves to more than 16 IP addresses, or if a host name (configured on the SIP trunk) resolves to more than 10 IP addresses. Thus, the status of a SIP trunk may change because of a change in the way a DNS query gets resolved, not because of any change in the status of any of the remote destinations.QUESTION 178When you configure Cisco Unified Communications Manager, you need to configure the router for Survivable Remote Site Telephony in case the Cisco Unified Communications Manger stops working.
