## Free Microsoft 70-513 Practice Tests Questions Download From Braindump2go! (31-40)

MICROSOFT NEWS: 70-513 Exam Questions has been Updated Today! Get Latest 70-513 VCE and 70-513 PDF Instantly! Welcome to Download the Newest Braindump2go 70-513 VCE&70-513 PDF Dumps:

http://www.braindump2go.com/70-513.html (341 Q&As) 70-513 Exam Dumps Free Shared By Braindump2go For Instant Download Now! Download Latest 70-513 Exam Questions and pass 70-513 one time easily! Do you want to be a winner? Exam Code: 70-513Exam Name: TS: Windows Communication Foundation Development with Microsoft .NET Framework 4Certification Provider: MicrosoftCorresponding Certifications: MCPD, MCPD: Web Developer 4, MCPD: Windows Developer 4, MCTS, MCTS: Microsoft .NET Framework 4, Service Communication Applications70-513 Dumps PDF,70-513 eBook,70-513 VCE,70-513 PDF,70-513 Latest Dumps,70-513 Certification,70-513 Training Kit PDF,70-513 Braindump,70-513 Exam Dumps,70-513 Exam Book,70-513 Exam Preparation,70-513 Dumps VCE,70-513 Practice Test,70-513 Pracrice Exam,70-513 Preparation Book

QUESTION 31You are developing a Windows Communication Foundation (WCF) service. One of the parameters used with the service operations is a security token. The security token is not sensitive. The monitoring software tracks security tokens and can read tokens in clear text only. The company security policy requires that you validate all clear text data passed over the corporate network. You need to ensure that the service verifies that the security token is not changed during transit. What should you do? A. For all the security-sensitive members, set the ProtectionLevel parameter of the MessageBodyMember or MessageHeader attribute to EncryptAndSign.B. Implement IEndpointIdentityProvider in the message contract class.C. Implement ISecureConversationSession in the message contract class.D. For all the security-sensitive members, set the ProtectionLevel parameter of the MessageBodyMember or MessageHeader attribute to Sign. Answer: D QUESTION 32You are creating a Windows Communication Foundation (WCF) service that implements operations in a RESTful manner. You need to add a delete operation You implement the delete method as follows. string oid Deleteltems(string id); You need to configire WCF to ci this method when the client calls the service with the HTTP DRETE operationWhat should you do? A. Add the Weblnvoke(UriTemplate = "/Items/(idy,Method="DELETE") attribute to the operationB. Add the HttpDelete tribute to the operationC. Replace the sting parameter with a RemovedActivityAction parameterD. Replace the return type with RemovedActivityktion. Answer: A QUESTION 33You develop a Windows Communication Foundation (WCF) RESTful service that provides media streaming services. The service includes the following code. (Line numbers are included for reference only.) The service must return an XML response. You need to apply the correct attribute to AddMediaTitle method. Which code segment should you insert at line 05? 01 [ServiceContract public interface] Braine

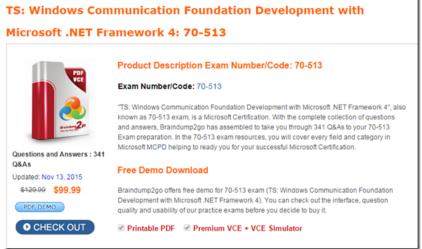

A. [WebInvolce(ResponseFormat = WebMessageFormat.Xml, BodyStyle = WebMessageBodyStyle.Wrapped)]B. [WebInvolce (ResponseFormat = WebMessageFormat.Xml, BodyStyle = WebMessageBodyStyle .Bare)]C. [WebInvolce (Method= "POST")]
D. [WebInvolce] Answer: A QUESTION 34An existing Windows Communication Foundation (WCF) service uses basicHttpBinding. You are releasing updates to the service and the client application. You need to enable the client application to

flow transactions to the service. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.) A. Change to a custom binding that has the httpTransport, textMessageEndcoding, and transactionFlow binding elements in this order.B. Change to a custom binding that has the transactionFlow, textMessageEncoding, and httpTransport binding elements in this order.C. Change the binding to use wsHttpBinding.D. Change the binding to use basicHttpContextBinding. Answer: BC QUESTION 35You are developing a client application that consumes a Windows Communication Foundation (WCF) service. You use the svcutil.exe utility to create a proxy for the service. You use the svcutil.exe switches that generate asynchronous calls. GetFlight is a service operation that takes no parameters and returns a string. The GetFlightCallback method must be called when the service operation returns. You create an instance of the client proxy with the following code:var client = new TranvelServiceClient();You need to ensure that a callback is received when the GetFlight operation is called asynchronously. Which code segment should you use? A. client.BeginGetFlight(GetFlightCallback, null); c. client.GetFlightCompleted += new EventHandler<GetFlightCompletedEventArgs>(GetFlightCallback);client.GetFlightCallback, null); c. client.GetFlightCompletedEventArgs>(GetFlightCallback);client.GetFlight(asyncResult); Answer: C QUESTION 36You are developing a Windows Communication Foundation (WCF) service to provide an in-memory cache for many Web applications. The service contract is defined as follows. (Line numbers are included for reference only.)You need to ensure that all users share the cache.

Which code segment should you insert at line 07?

A. [ServiceBehavior(TransactionIsolationLevel = IsolationLevel.RepeatableRead)]B. [ServiceBehavior(InstanceContextMode = InstanceContextMode.Single)]C. [ServiceBehavior(InstanceContextMode = InstanceContextMode.PerSession)]D. [ServiceBehavior(TransactionIsolationLevel = IsolationLevel.ReadComitted)] Answer: B QUESTION 37A Windows Communication Foundation (WCF) solution exposes the following service over a TCP binding. (Line numbers are included for reference only.)01 [ServiceContract]02 [ServiceBehavior(ConcurrencyMode = ConcurrencyMode.Multiple)]03 public class DataAccessService04 {05 [OperationContract]06 public void PutMessage(string message)07 {08 MessageDatabase.PutMessage(message);09 }10 [OperationContract]11 pubic string[] SearchMessages(string search)12 {13 return MessageDatabase.SearchMessages(search);14 }15 }MessageDatabase supports a limited number of concurrent executions of its methods. You need to change the service to allow up to the maximum number of executions of the methods of MessageDatabase. This should be implemented without preventing customers from connecting to the service. What should you do? A. Change the service behavior as follows.[ServiceBehavior(ConcurrencyMode = ConcurrencyMode.Multiple, InstanceContextMode = InstanceContextMode.Single)]B. Change the service behavior as follows.[ServiceBehavior(ConcurrencyMode = ConcurrencyMode.Single, InstanceContextMode = InstanceContextMode.PerSession)]C. Add a throttling behavior to the service, and configure the maxConcurrentCalls.D. Add a throttling behavior to the service, and configure the maxConcurrentSessions. Answer: C QUESTION 38You are developing a Windows Communication Foundation (WCF) service. You need to enable security auditing for all events. What should you do? A. Set the serviceAuthorizationAuditLevel setting to Success and the messageAuthenticationAuditLevel setting to Success.B. Set the messageAuthenticationAuditLevel setting to Success and the auditLogLocation setting to Application.C. Set the serviceAuthorizationAuditLevel setting to SuccessAndFailure and the messageAuthenticationAuditLevel setting to SuccessAndFailure.D. Set the messageAuthenticationAuditLevel setting to SuccessAndFailure and the auditLogLocation setting to Security. Answer: C QUESTION 39You are debugging a Windows Communication Foundation (WCF) service. The service uses signed and encrypted messages. You need to configure logging so that you can read the contents of the messages. What should you do? A. Set maxSizeMessagesToLog to 10B. Set logMessageAtServiceLevel to true.C. Set maxMessagesToLog to 10.D. Set logMessageAtTransportLevel to true. Answer: B QUESTION 40You are hosting a Windows Communication Foundation (WCF) service at http://www.contoso.com for a law enforcement agency. The agency adds operations to support sending biometric fingerprint data via non-buffered streaming. The service data is not routed between intermediaries. The WCF binding you are using by default does not support encryption. You need to ensure that fingerprint data is not disclosed when it is passed over the network. What should you do? A. Use basicHttpBinding with message security to <a href="https://www.contoso.com">https://www.contoso.com</a>. Use basicHttpBinding over transport security at <a href="https://www.contoso.com">https://www.contoso.com</a>. B.

C. Use wsHttpBinding over message security at <a href="https://www.contoso.com">https://www.contoso.com</a>. Use wsHttpBinding over transport security at <a href="https://www.contoso.com">https://www.contoso.com</a>. Answer: B Want Pass 70-513 Exam At the first try? Come to Braindump2go!
