QUESTION 21Drag and Drop QuestionA company is implementing a SharePoint farm that will contain six servers. The farm architecture design must meet the following requirements:- Distribute incoming user requests equally.- Provide high availability.You need to distribute the servers and roles to meet the requirements. How should you distribute the servers and roles? (To answer, drag the appropriate server or role to the correct location or locations in the answer area. Each server or role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

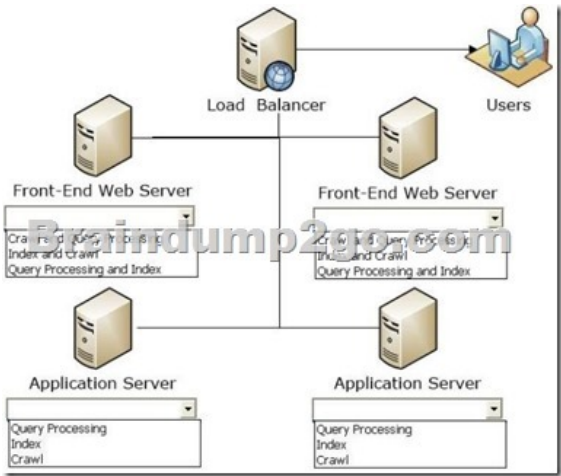

Answer:

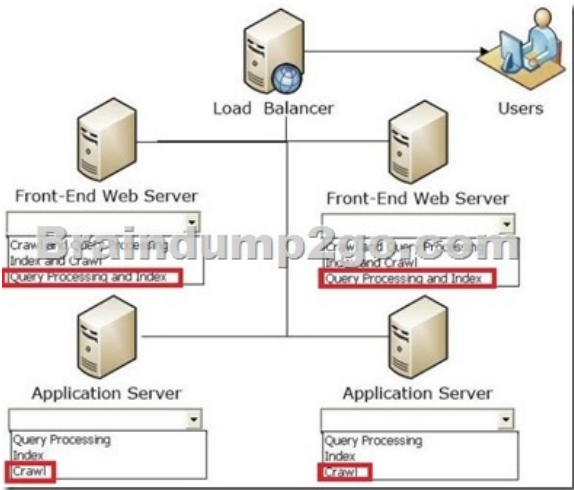

Explanation:* Use load balancer connected to the Web Servers/ What is the Service Application Load Balancer?In order to simplify installation of multi-machine server farms, SharePoint provides a basic load balancer that can round-robin requests to Web service applications. This provides load balancing and fault-tolerance out-of-the-box for SharePoint service applications without requiring the administrator to be familiar with the intricacies of external load balancing solutions.* The application servers are between the Web servers and the SAN* Storage:Use latest SQL Server. QUESTION 22Hotspot QuestionYou are designing the search service

topology for a SharePoint farm. The design must meet the following requirements:- Search services must be fault tolerant and highly available.- Search crawls must not affect page load times.- Search queries must run at the fastest possible speed. You need to distribute the appropriate search service roles to meet the requirements.How should you distribute the service roles? (To answer, select the appropriate service role from each drop- down list in the answer area.)

Answer:

Explanation:Query Processing and IndexNote:* Query processing componentAnalyzes incoming queries. This helps to optimize precision, recall and relevance. The queries are sent to the index component, which returns a set of search results for the query.* Index component Receives the processed items from the content processing component and writes them to the search index. This component also handles incoming queries, retrieves information from the search index and sends back the result set to the query processing component.* Crawl component Crawls content sources to collect crawled properties and metadata from crawled items and sends this information to the content processing component. QUESTION 23Hotspot QuestionYou are managing search results in a SharePoint farm. You need to configure a query rule that fires for all queries. In the Search service application, which option should you select? (To answer, select the appropriate option in the answer area.)

Rule name

Query Matches Keyword Exactly

Query exactly matches one of these phrases (semi-colon separated)

Add Alternate Condition

Promoted Results

Add Promoted Result

Result Blocks

Add Result Block

Change ranked results by changing the query

Answer: Rule name

Query Matches Keyword Exactly

Query exactly matches one of these phrases (semi-colon separated)

Braindump2go.com

Add Alternate Condition

Promoted Results

Add Promoted Result

Result Blocks

Add Result Block

Change ranked results by changing the query

Explanation: If you are creating this rule for a site collection, click Remove Condition if you want this rule to fire for every query that users type inside any search box in the site collection. QUESTION 24 Drag and Drop Question You manage a SharePoint farm. The sales team would like to evaluate the Microsoft SQL Server 2012 Reporting Services (SSRS) Power View feature. You need to install Reporting Services for SharePoint to support Power View. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Braindump2go.com

Activate the Power View site collection feature.

Install SSRS in SharePoint integrated mode.

Install SSRS in native mode.

Install and start the SSRS SharePoint service.

Create an SSRS service application.

Answer:

Answer Area

Activate the Power View site collection feature.

Install SSRS in SharePoint integrated mode.

Install SSRS in native mode.

Install and start the SSRS SharePoint service.

Create an SSRS service application.

QUESTION 25 Drag and Drop Question A company has a SharePoint 2013 farm in an Active Directory Domain Services (AD DS) domain. The company uses a third-party application to process payroll data and view payroll reports. The third-party application uses SQL Authentication. Payroll administrators currently use custom credentials to sign in to the payroll application. You have the following requirements:- Payroll administrators must use Microsoft Excel and Excel Services to access payroll data and view reports from within SharePoint.- Payroll administrators must not be required to enter credentials when accessing payroll data.- The Secure Store must be configured for high security and high process isolation. You need to configure the Secure Store to meet the requirements. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer Area

Generate a new key for your Secure Store service application.

Configure the site collection administrator account in SharePoint Server to run the Secure Store application pool.

Store credentials in the Secure Store service application.

Create a Secure Store service application instance, and start the Secure Store service on servers within the farm.

Register a managed account to run the Secure Store application pool.

Braindump2go.com

Answer:

	Answer Area
Generate a new key for your Secure Store service application.	Register a managed account to run the Secure Store application pool.
Configure the site collection administrator account in SharePoint Server to run the Secure Store application pool.	Create a Secure Store service application instance, and start the Secure Store service on servers within the farm.
Store credentials in Secure Store by using a Secure Store target application.	Generate a new key for your Secure Store service application.
Create a Secure Store service application instance, and start the Secure Store service on servers within the farm.	Store credentials in Secure Store by using a Secure Store target application.
Register a managed account to run the Secure Store application pool.	

QUESTION 26 Drag and Drop Question A company has a SharePoint 2013 farm. The company is in the process of configuring eDiscovery for Microsoft Exchange Server 2013 and has installed the Microsoft Exchange Web Services Managed API on each front-end web server. You need to configure a trust relationship between the Exchange server and the SharePoint farm. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

	Answer Area
Run the Set-FrontendTransportServer Windows PowerShell cmdlet on the Exchange server.	
Run the New-MailboxSearch Windows PowerShell cmdlet on the Exchange server.	
Configure the SharePoint web application that processes incoming server-to-server requests to use SSL.	
Configure the SharePoint farm to trust the Exchange server.	
Configure IIS on the front-end web servers to trust incoming connections from the Exchange server.	
Configure the Exchange server to trust the SharePoint farm.	

Answer:

	Answer Area
Run the Set-FrontendTransportServer Windows PowerShell cmdlet on the Exchange server.	Configure the SharePoint farm to trust the Exchange server.
Run the New-MailboxSearch Windows PowerShell cmdlet on the Exchange server.	Configure the Exchange server to trust the SharePoint farm.
Configure the SharePoint web application that processes incoming server-to-server requests to use SSL.	Configure IIS on the front-end web servers to trust incoming connections from the Exchange server.
Configure the SharePoint farm to trust the Exchange server.	Configure the Exchange server to trust the SharePoint farm.
Configure IIS on the front-end web servers to trust incoming connections from the Exchange server.	
Configure the Exchange server to trust the SharePoint farm.	

QUESTION 27 Hotspot Question You upgrade a SharePoint 2010 environment to SharePoint 2013. The new environment includes the following site collections.

URL	Content Database
http://intranet.contoso.com	WSS_Content
http://extranet.contoso.com	WSS_Extranet

All site collections are backward compatible with SharePoint 2010. You are preparing to allow site owners to upgrade sites to SharePoint 2013 compatibility mode. You need to limit the number of sites that can be upgraded concurrently to five or fewer. Which Windows PowerShell cmdlets should you run? (To answer, select the appropriate cmdlet from each drop-down list in the answer area.)

<div> <div></div> <div> \$var = Get-SPWebApplication http://intranet.contoso.com \$var = Get-SPWebApplication WSS_Content \$var = Set-SPContentDatabase http://intranet.contoso.com \$var = Set-SPContentDatabase WSS_Content </div> </div>
<div> <div></div> <div> \$var.SiteUpgradeThrottleSettings.UsageStorageLimit = 5 \$var.ConcurrentSiteUpgradeSessionLimit = 5 \$var.EnableThrottling = 5 \$var.ThrottleSettings = 5 </div> </div>

Answer:

```
$var = Get-SPWebApplication http://intranet.contoso.com
$var = Get-SPWebApplication WSS_Content
$var = Set-SPContentDatabase http://intranet.contoso.com
$var = Set-SPContentDatabase WSS_Content

$var.SiteUpgradeThrottleSettings.UsageStorageLimit = 5
$var.ConcurrentSiteUpgradeSessionLimit = 5
$var.EnableThrottling = 5
$var.ThrottleSettings = 5
```

Explanation: * Set-SPContentDatabases sets global properties of a SharePoint content database. *

ConcurrentSiteUpgradeSessionLimit The limit on how many site upgrade sessions can happen concurrently on this database.

QUESTION 28 Drag and Drop Question You provision and configure a new SharePoint farm. The content databases are stored in Microsoft SQL Server 2012. You need to configure the databases for high availability. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Explanation: Box 1: Create a Windows Server failover cluster. Box 2: Enable AlwaysOn and Named Pipes on the server. Box 3: Create and configure an availability group for the relevant nodes. Box 4: Add the necessary databases to the availability group. Note: * Process overview We recommend the following installation sequence and key configuration steps to deploy a SharePoint farm that uses an AlwaysOn availability group: (step 1) Select or create a Windows Server failover cluster. Install SQL Server 2012 on each cluster node. (step 3) Create and configure an availability group. Install and configure SharePoint 2013. (step 4) Add the SharePoint databases to the availability group. Test failover for the availability group. * (step 2) Before you can create an Availability Group for SharePoint Foundation 2013 or SharePoint Server 2013, you must prepare the SQL Server 2012 environment. To prepare the environment, complete the following tasks: Install the SQL Server prerequisites. Install SQL Server. Enable Named Pipes. Enable AlwaysOn. Reference: Configure SQL Server 2012 AlwaysOn Availability Groups for SharePoint 2013 QUESTION 29 You need to ensure that users can install apps from the App Catalog. Which permission or permissions should you grant to the users? A. Use Client Integration Features B. Manage Web Site and Create Subsites C. Use Self-Service Site Creation D. Add and Customize Pages Answer: B QUESTION 30 Hotspot Question An organization has an Active Directory Domain Services (AD DS) domain that includes a security group named SPAdmins. Employees use SharePoint to connect to external business systems. In Central Administration, you select Manage Service Applications. You need to configure the Secure Store service application to ensure that members of the SPAdmins group can create new Secure Store target applications. Which button should you click to begin the process? (To answer, select the appropriate button in the answer area.)

Answer:

Explanation: To assign or remove administrators to a service application by using Central Administration Reference: Assign or remove administrators to a service application (SharePoint 2013) Braindump2go New Published Exam Dumps: Microsoft 70-332 Practice Tests Questions, 180 Latest Questions and Answers from Official Exam Centre Guarantee You a 100% Pass!
