Case Study 1 - VanArsdel, Ltd (Question 1 - Question 8)OverviewVanArsdel, Ltd. builds skyscrapers, subways, and bridges. VanArsdel is a leader in using technology to do construction better.OverviewVanArsdel employees are able to use their own mobile devices for work activities because the company recognizes that this usage enables employee productivity. Employees also access Software as a Service (SaaS) applications, including DocuSign, Dropbox, and Citrix. The company continues to evaluate and adopt more SaaS applications for its business. VanArsdel uses Azure Active Directory (AD) to authenticate its employees, as well as Multi-Factor Authentication (MFA). Management enjoys the ease with which MFA can be enabled and disabled for employees who use cloud-based services. VanArsdel's on-premises directory contains a single forest.Helpdesk:VanArsdel creates a helpdesk group to assist its employees. The company sends email messages to all its employees about the helpdesk group and how to contact it. Configuring employee access for SaaS applications is often a time-consuming task. It is not always obvious to the helpdesk group which users should be given access to which SaaS applications. The helpdesk group must respond to many phone calls and email messages to solve this problem, which takes up valuable time. The helpdesk group is unable to meet the needs of VanArsdel's employees.However, many employees do not work with the helpdesk group to solve their access problems. Instead, these employees contact their co-workers or managers to find someone who can help them. Also, new employees are not always told to contact the helpdesk group for access problems. Some employees report that they cannot see all the applications in the Access Panel that they have access to. Some employees report that they must re-enter their passwords when they access cloud applications, even though they have already authenticated.Bring your own device (BYOD):VanArsdel wants to continue to support users and their mobile and personal devices, but the company is concerned about how to protect corporate assets that are stored on these devices. The company does not have a strategy to ensure that its data is removed from the devices when employees leave the company.Customer Support VanArsdel wants a mobile app for customer profile registration and feedback. The company would like to keep track of all its previous, current, and future customers worldwide. A profile system using third-party authentication is required as well as feedback and support sections for the mobile app.Migration:VanArsdel plans to migrate several virtual machine (VM) workloads into Azure. They also plan to extend their on-premises Active Directory into Azure for mobile app authentication.Business RequirementsHybrid Solution:A single account and credentials for both on-premises and cloud applications Certain applications that are hosted both in Azure and on-site must be accessible to both VanArsdel employees and partnersThe service level agreement (SLA) for the solution requires an uptime of 99.9%The partners all use Hotmail.com email addressesMobile App:VanArsdel requires a mobile app for project managers on construction job sites. The mobile app has the following requirements:The app must display partner information.The app must alert project managers when changes to the partner information occur.The app must display project information including an image gallery to view pictures of construction projects.Project managers must be able to access the information remotely and securely.Security:VanArsdel must control access to its resources to ensure sensitive services and information are accessible only by authorized users and/or managed devices. Employees must be able to securely share data, based on corporate policies, with other VanArsdel employees and with partners who are located on construction job sites. VanArsdel management does NOT want to create and manage user accounts for partners.Technical RequirementsArchitecture:VanArsdel requires a non-centralized stateless architecture fonts data and services where application, data, and computing power are at the logical extremes of the network. VanArsdel requires separation of CPU storage and SQL servicesData Storage:VanArsdel needs a

solution to reduce the number of operations on the contractor information table. Currently, data transfer rates are excessive, and queue length for read/write operations affects performance.A mobile service that is used to access contractor information must have automatically scalable, structured storage Images must be stored in an automatically scalable, unstructured form.Mobile Apps: VanArsdel mobile app must authenticate employees to the company's Active Directory.Event-triggered alerts must be pushed to mobile apps by using a custom Node.js script.The customer support app should use an identity provider that is configured by using the Access Control Service for current profile registration and authentication. The customer support team will adopt future identity providers that are configured through Access Control Service.Security:Active Directory Federated Server (AD FS) will be used to extend AD into Azure.Helpdesk administrators must have access to only the groups of Azure resources they are responsible for. Azure administration will be performed by a separate group.IT administrative overhead must be minimized.Permissions must be assigned by using Role Based Access Control (RBAC).Line of business applications must be accessed securely. QUESTION 1You need to assign permissions for the Virtual Machine workloads that you migrate to Azure.The solution must use the principal of least privileges.What should you do? A.   Create all VMs in the cloud service named Groupl and then connect to the Azure subscription. Run the following Windows PowerShell command:New-AzureRoleAssignment-Mail user1@vanarsdelltd.com?RoleDefinitionName Contributor-ResoureeGroupName group1B.   In the Azure portal, select an individual virtual machine and add an owner.C.   In the Azure portal, assign read permission to the user at the subscription level.D.   Create each VM in a separate cloud service and then connect to the Azure subscription. Run the following Windows PowerShell command:Get-AzureVM | New-AzureRoleAssignment-Mail userl@vanarsdelltd.com-RoleDefinitionName Contributor Answer: A QUESTION 2You need to design the system that alerts project managers to data changes in the contractor information app.Which service should you use? A. Azure Mobile ServiceB.   Azure Service Bus Message QueueingC.   Azure Queue MessagingD.   Azure Notification Hub Answer: BExplanation:https://msdn.microsoft.com/en-us/library/azure/hh767287.aspx QUESTION 3You need to recommend a solution that allows partners to authenticate.Which solution should you recommend? A.   Configure the federation provider to trust social identity providers.B.   Configure the federation provider to use the Azure Access Control service.C.   Create a new directory in Azure Active Directory and create a user account for the partner.D.   Create an account on the VanArsdel domain for the partner and send an email message that contains the password to the partner. Answer: BExplanation: http://azure.microsoft.com/en-gb/documentation/articles/active-directory-dotnet-how-to-use-access-control/ https://msdn.microsoft.com/en-us/library/azure/gg185971.aspx QUESTION 4You are designing a plan to deploy a new application to Azure. The solution must provide a single sign-on experience for users.You need to recommend an authentication type.Which authentication type should you recommend? A.   SAML credential tokensB.   Azure managed access keysC.   Windows AuthenticationD.   MS-CHAP Answer: AExplanation: https://msdn.microsoft.com/en-us/library/azure/dn641269.aspx?f=255&MSPPError=-2147217396 QUESTION 5You need to prepare the implementation of data storage for the contractor information app.What should you? A.   Create a storage account and implement multiple data partitions.B.   Create a Cloud Service and a Mobile Service. Implement Entity Group transactions.C. Create a Cloud Service and a Deployment group. Implement Entity Group transactions.D.   Create a Deployment group and a Mobile Service. Implement multiple data partitions. Answer: BExplanation:VanArsdel needs a solution to reduce the number of operations on the contractor information table.Currently, data transfer rates are excessive, and queue length for read/write operations affects performance.https://msdn.microsoft.com/en-us/library/azure/dd894038.aspx QUESTION 6You need to ensure that users do not need to re-enter their passwords after they authenticate to cloud applications for the first time.What should you do? A.   Enable Microsoft Account authentication.B.   Set up a virtual private network (VPN) connection between the VanArsdel premises and Azure datacenter. Set up a Windows Active Directory domain controller in Azure VM. Implement Integrated Windows authentication.C.   Deploy ExpressRoute.D.   Configure Azure Active Directory Sync to use single sign-on (SSO). Answer: D QUESTION 7Drag and Drop QuestionYou need to recommend data storage mechanisms for the solution. What should you recommend? To answer, drag the appropriate data storage mechanism to the correct information type. Each data storage mechanism may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.Select and Place:

Answer:

Explanation:http://www.thewindowsclub.com/understanding-blobqueuetable-storage-windows-azure QUESTION 8Hotspot QuestionYou need to design the contractor information app.What should you recommend? To answer, select the appropriate options in the answer area.Hot Area:

Answer:

Explanation:- They also plan to extend their on-premises Active Directory into Azure for mobile app authentication- VanArsdel mobile app must authenticate employees to the company's Active Directory.
http://azure.microsoft.com/en-gb/documentation/articles/mobile-services-ios-get-started-offlinedata/ QUESTION 9You are designing an Azure web application. The solution will be used by multiple customers. Each customer has different business logic and user interface requirements. Not all customers use the same version of the .NET runtime.You need to recommend a deployment strategy.What should you recommend? A.   Deploy with multiple web role instances.B.   Deploy each application in a separate tenant.C.   Deploy all applications in one tenant.D.   Deploy with multiple worker role instances. Answer: BExplanation:
http://sanganakauthority.blogspot.in/2011/12/multi-tenancy-and-windows-azure.html QUESTION 10You design an Azure application that processes images. The maximum size of an image is 10 MB. The application includes a web role that allows users to upload images and a worker role with multiple instances that processes the images. The web role communicates with the worker role by using an Azure Queue service.You need to recommend an approach for storing images that minimizes storage transactions.What should you recommend? A.   Store images in Azure Blob service. Store references to the images in the queue.B.   Store images in the queue.C.   Store images in OneDrive attached to the worker role instances. Store references to the images in the queue.D.   Store images in local storage on the web role instance. Store references to the images in the queue. Answer: AExplanation:
