Vendor APIVendors receive and provide updates for the restaurant inventory and delivery services by using Azure API Management hosted APIs. Each vendor uses their own subscription to access each of the APIs.APLs must meet the following conditions:- API usage must not exceed 5.000 calls and 50.000 kilobytes of bandwidth per hour per vendor.- If a vendor is nearing the number of calls or bandwidth limit, the API must trigger email notifications to the vendor.- APIs must prevent API usage spikes on a per subscription basis by limiting the call rate lo 100 calls per minute.- The Inventory API must be written by using ASP.NET Core and Node.js.- The API must be updated to provide an interface to Azure SQL Database. Database objects must be managed by using code.- The Delivery API must be protected by using the OAuth 2.0 protocol with Azure Active Directory (Azure AD) when called from the Azure web app. You register the Delivery API and web app in Azure AD. You enable OAuth 2.0 in the web app.- The delivery API must update the Products table, the Vendor transactions table, and the Billing table in a single transaction. ArchitectureThe Best For You Organics Company architecture team has created the following diagram depicting the expected deployments into Azure:
