Answer:

server named EX01. EX01 contains a mailbox database named DB01. The volume that contains DB01 fails. You need to perform a

dial-tone recovery of the database. What should you create first? A. a new Recovery Storage Group B. a new mailbox database C. a mailbox move request D. a mailbox restore request E. a lagged database copy Answer: B QUESTION 6 You have an Exchange Server 2016 organization. The organization contains several servers. Users in the marketing department often send Information Rights Management (IRM)-protected email messages. The IRM-protected messages are excluded from eDiscovery searches. You need to configure the Exchange Server Organization to ensure that the contents of the mailboxes of the marketing department users are searched for all messages that contain the word ProjectX. The solution must prevent the email messages from being deleted permanently. Your user account is a member of the required role group. Which three actions should you perform? Each correct answer present part of the solution. A. Run the New-Mailbox cmdlet B. Run the New-MailboxSearch cmdlet C. Run the Set-IRMConfiguration cmdlet D. Run the Search-Mailbox cmdlet E. Export the results from the discovery mailbox to a personal folders (PST) file, and then use Microsoft Outlook to open the PST file F. Use Outlook on the web to open the discovery mailbox.

Answer: BCE Explanation: [https://technet.microsoft.com/en-us/library/dn440164\(v=exchg.160\).aspx?f=255&MSPPErr=-2147217396](https://technet.microsoft.com/en-us/library/dn440164(v=exchg.160).aspx?f=255&MSPPErr=-2147217396)

The organization contains three servers and 2,000 mailboxes. The organization audits all access to user mailboxes. The company's security policy has the following requirements:- Audit the name of each administrator who modifies the Exchange Server organization settings.- Reduce the amount of audit log information generated by a service account named Service1.- Create an audit entry when an administrator modifies the permissions of another administrative mailbox. You need to identify which PowerShell cmdlets must be used to meet the requirements. Which PowerShell cmdlet should you identify for each requirement? To answer, drag the appropriate cmdlets to the correct requirements. Each cmdlet may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content.

Cmdlets

- Set-AdminAuditLogConfig
- Set-MailboxAuditBypassAssociation
- Set-OrganizationConfig
- Write-AdminAuditLog

Answer Area

Reduce the amount of audit log information generated by Service1: Cmdlet

Audit the name of each administrator who modifies the Exchange Server organization settings: Cmdlet

Answer:

Cmdlets

- Set-AdminAuditLogConfig
- Set-MailboxAuditBypassAssociation
- Set-OrganizationConfig
- Write-AdminAuditLog

Answer Area

Reduce the amount of audit log information generated by Service1: Cmdlet

Audit the name of each administrator who modifies the Exchange Server organization settings: Cmdlet

QUESTION 8 Your company has an Exchange Server 2016 organization. All users have a primary mailbox and archive mailboxes. You create a new retention policy for the users. The policy includes the following types of tags: A default retention policy tag (RPT) applied to the mailbox: The tag is configured to move email messages older than three years to the archive. An RPT applied to the users' Sent Items folder: The tag is configured to move email messages older than one year to the archive. The corporate retention policy is applied to all of the mailboxes. A user creates a personal tag named Tag1. The personal tag is configured to delete items permanently after 180 days. The user sends an email message that uses Tag1. You need to identify what will occur to the message. What should you identify? A. The message will be deleted in six months. B. The message will be moved to the archive in one year. C. The message will be moved to the archive in one year and deleted six months later. D. The message will be moved to the archive in three years. Answer: A Explanation: Personal tags allow your users to determine how long an item should be retained. For example, the mailbox can have a DPT to delete items in seven years, but a user can create an exception for items such as newsletters and automated notifications by applying a personal tag to delete them in three days.

The data center contains a server that has Exchange Server 2016 and the Mailbox server role installed. Outlook anywhere clients connect to the Mailbox server by using the name outlook.contoso.com. The company plans to open a second data center and to provision a database availability group (DAG) that spans both data centers. You need to ensure that Outlook Anywhere clients can connect if one of the data centers becomes unavailable. What should you add to DNS? A. one A record B. two TXT records C. two SRV records D. one MX record Answer: A Explanation: [https://technet.microsoft.com/en-us/library/dd638104\(v=exchg.150\).aspx?f=255&MSPPErr=-2147217396](https://technet.microsoft.com/en-us/library/dd638104(v=exchg.150).aspx?f=255&MSPPErr=-2147217396) !!!RECOMMEND!!! 1.|2016/08 Braindump2go Latest 70-345 PDF & 70-345 VCE Dumps 80Q&As Download: <http://www.braindump2go.com/70-345.html> 2.|2016/08
