QUESTION 1You are the administrator of a SQL Server 2008 instance. All the instances run on their independent server. The three instances are respectively named InstanceA, InstanceB, and InstanceC. Between InstanceA and InstanceB, you configure a mirroring mission-critcal database. InstanceA currently acts as the Principal and InstanceC acts as the witness. You intend to apply a patch to both servers as soon as possible, the patch needs to restart the server. You must make sure that the database is online on the partner that currently does not apply the patch and during this time the database does not failover to the other partner. Which action should you perform to achieve this goal? A. First, you should stop the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should resume the mirroring session. Fourth, you should manually failover the mirroring session. At last, you should apply the patch to the server that runs Instance1.B. First, you should apply the patch to the server that runs InstanceB. Second you apply the patch to the server that runs InstanceA.C. First, you should apply the patch to the server that runs InstanceB. Second you failover the mirroring session manually. At last apply the patch to the server that runs InstanceAD. First, you should remove the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should apply the patch to the server that runs Instance1. At last re-establish the mirroring session. Answer: A QUESTION 2You are the administrator of a SQL Server 2008 instance with a database named DB1.In the Services schema there is a table named Service.Table. The Services.Table has to be moved from the Sales schema to a new schema named Costs. Which Transact-SQL statement should you execute? A. ALTER TABLE Service.Table SWITCH TO Costs.Table1;B. ALTER SCHEMA Costs TRANSFER Service.Table; C. ALTER USER Service WITH DEFAULT_SCHEMA = Costs;D. ALTER AUTHORIZATION ON Service.Table1 TO Costs; Answer: B QUESTION 3You are the administrator of a SQL Server 2008 instance with a database named DB1. which contains the following stored procedure. (Line numbers are useded for reference only.) 01 CREATE PROCEDURE Sales.Procedure1 02 AS 03 IF OBJECT_ID('Service.Table') IS NOT NULL 04 DROP TABLE Service.Table; 05 06 CREATE TABLE Service.Table (07 Id int PRIMARY KEY CLUSTERED,08 Name varchar(100); 09); 10 11 ... 12 GO The following exception is raised when a user tries to invoke Procedure1, "Msg 262, Level 14, State 1, Procedure Procedure1, Line 5CREATE TABLE permission denied in database 'DB1'." You should grant the user access to execute Procedure1, you must assign only the required permissions. Which action should you perform? A. Between lines 01 and 02, you should insert the WITH EXECUTE AS 'dbo' clause.B. Between lines 01 and 02, you should insert the EXECUTE AS USER = 'dbo' statement.C. You should give the user the ALTER permission on the Service schemaD. You should give the CREATE TABLE permission and permit the user to drop the Service.Table table. Answer: A QUESTION 4You are the administrator of a SQL Server 2008 instance with a database named Dworks. The table below shows the two tables of the Dworks database:There are two partitions in the BillHistory table. Partition1 is empty while partition2 contains all data. You intend to move data from partition2 to the appropriate partition of the BillHistory table. Partions2 contains data for the oldest month of the Bills table.You are going to develop a process to achieve this. You have to make sure that at the end of every month the process can be repeated. A. Alter the partition function of the BillHistory table by using the split option. Switch the appropriate partition of the Bills table to the appropriate partition of the BillHistory table. Alter the BillHistory table by using the split option.B. Alter the partition function of the Bills table by using the split option. Alter the Billstable by using the merge option.C. Alter the partition function of the BillHistory table by using the split option. Switch the appropriate partition of the Bills table to the appropriate partition of the BillHistory table. Alter the BillHistory table by using the merge option. Alter the Bills table by using the merge option.D. Alter the partition function of the Bills table by using the split option. Alter the BillHistory table by using the split option. Alter the partition function of the BillHistory table by using the merge option. Alter the Bill stable by using

the merge option. Answer: C QUESTION 5You are the administrator of a SQL Server 2008 instance.You notice that the application has a poor performance. On the remote SQL Server instance, you capture a workload of the remote instance to a trace table by using SQL Profiler. You use the Database Engine Tuning Advisor to analyze the workload of the remote SQL Server instance on a local SQL Server instance. Which action should you perform to achieve this goal? A. You should recapture the workload by using the data collector.B. You should enable the XP_MSVER stored procedure on the local server.C. You should enable the XP_MSVER stored procedure on the remote serverD. You should recapture the workload to a trace file by using SQL Profiler. Answer: D QUESTION 6You are the administrator of a SQL Server 2008 instance. According to the company requirement the names of all user-defined stored procedures must contain the prefix usp_ on all instances. You have to make sure that stored procedures that do not contain this prefix cannot be created by you.What should you do? A. A policy should be created. The policy targets the name of the stored procedure that is evaluated on demand.B. A policy should be created. The policy targets the name of the stored procedure that is evaluated on change.C. A condition should be created. The condition targets the name of the stored procedure that is evaluated on changeD. A condition should be created. The condition targets the name of stored procedure that is evaluated on demand. Answer: B QUESTION 7You are the administrator of a SQL Server 2008 instance. There is a n On-Line Analytical Processing (OLAP) database named in the instance.The database contains a dimension table named Clients. Ever hour backup of data of the Clients table is performed. But the Clinets table contains redundant data. You must keep the disk space used to store the Clients table. Which compression technology should you use? A. You should use row compressionB. You should use page compressionC. You should use backup compressionD. You should use windows NTFS file system compression Answer: B QUESTION 8You are the administrator of a SQL Server 2008 instance. There is a text file which is named SQL01.log on the E: drive. A SQL Server Agent job executes every 2 minutes and logs information to the text file.You get a report from users saying that the sever doesn't make response. As the technical support, you check and find that the SQL Server Agent service does not run and the SQL Server Agent job no longer functions.You have to identify the reason why the SQL Server Agent service is unresponsive. Which log should you check? A. You should check SQL1.logB. You should check SQLAGENT.OUTC. You should check log_xx.trcD. You should check ERRORLOG Answer: B QUESTION 9You are the administrator of a SQL Server 2008 instance. A SQL Server Agent job is failing.You find that the job history information is incomplete and seems to be truncated after you review it. All information produced by a job must be available for viewing. Which action should you perform to achieve this goal? A. You should enable notifications to the Windows application event log when the job completes.B. You should enable write OEM fileC. You should enable all job steps, making them send the output to a fileD. You should include execution trace messages in the SQL Agent Error log Answer: C QUESTION 10You are the administrator of a SQL Server 2008 instance. There is a database named DB1 in the instance. On DB1, quite few logged operations are performed. Now according to the requirement of the company CIO, you must validate that the database can be restored to a specific point in time. Which action should you perform to achieve this goal? A. You should verify that the simple recovery model is used by the databaseB. You should verify that the full recovery model is used by the database.C. You should verify that the checksum page verify option is used by the databaseD. You should verify that the bulk-logged recovery model is used by the database Answer: B Braindump2go 70-432 Latest Updaed Braindumps Including All New Added 70-432 Exam Questions from Exam Center which Guarantees You Can 100% Success 70-432 Exam in Your First Try Exam!
